

Pioneer Hi-Bred Production Wingham

A corporate culture of sustainability supports our carbon footprint initiative. What are we doing to reduce our carbon footprint?

What we do

The DuPont Pioneer Wingham Parent Seed Plant is an agriculture seed production facility. Canola and soybean products are grown in local fields. At harvest, seed is trucked to the plant where it can be cleaned, treated, packaged, shipped or stored in the warehouse. Seed is sent to many locations across Canada and the United States, to other Pioneer plants, for further seed multiplication or field yield testing. Wingham employees are involved in a wide range of seed plant activities as well as planting and harvesting of the canola fields.
